

Classifying Art Periods With Neural Networks

Caroline Shi

Objective

- How accurately can we predict a painting's art period using neural networks?
- Distinguishing between art periods that are similar to each other vs very disparate periods

Data, Tools

- Grabbing data from Kaggle
 - Balanced classes
- Which art periods to choose?
 - 1,000 → 2,000 per class
- Using Google Colab

Art History 101

Neoclassicism
18–19th c.

Impressionism
late 19th c.

Surrealism
early 20th c.

Binary Model

Surrealism vs Neoclassicism

NN Model	Accuracy
CNN	0.720

MobileNet	0.925
-----------	-------

Changing Art Periods

Image Augmentation

Dropout

Transfer Learning

3 Class Model

Surrealism vs Neoclassicism vs Impressionism

NN Model	Accuracy
CNN	0.626
Feature Extraction	0.763

More Data	0.805
-----------	-------

Predictions

Actual: Impressionism
Predicted: Impressionism

Actual: Neoclassicism
Predicted: Neoclassicism

Actual: Surrealism
Predicted: Neoclassicism

5 Class Model

Accuracy

0.561

Looking at Misclassifications

Actual: Romanticism
Predicted: Neoclassicism

Actual: Romanticism
Predicted: Neoclassicism

Actual: Expressionism
Predicted: Surrealism

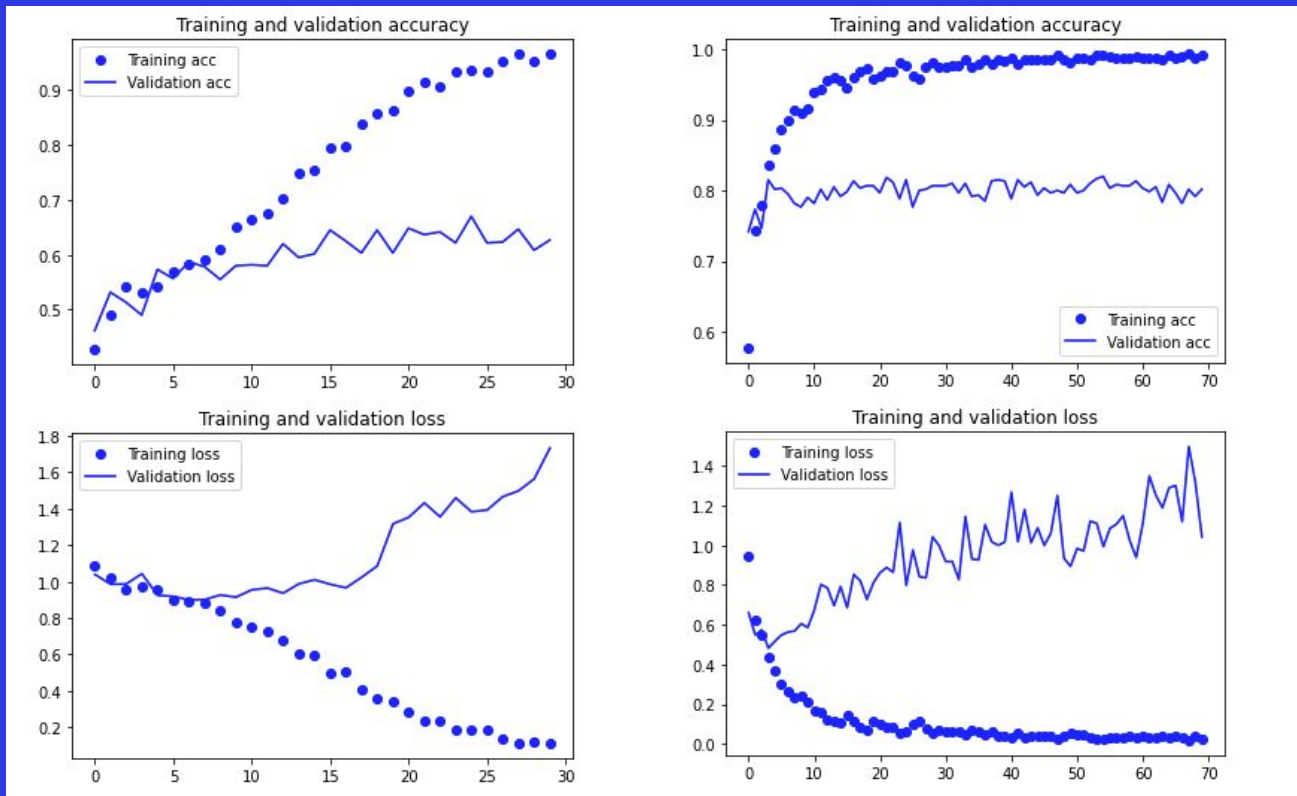

Future Work

- Tuning 5 class model
- Adding in more art periods
- Creating an app to classify art periods
 - Output of 2 art periods?

Appendix

3 class CNN vs transfer learning

Appendix 2

VGG16 with feature extractions confusion matrix
